Open the Autocad.exe in the root directory of the Autodesk installed application folder and follow the instructions. References External links Category:3D graphics softwareWe continue our coverage of the current trends in the blockchain space, this time in the field of supply chain. We look at three such projects that are worth mentioning: ShipChain. VITA, a vehicle information and tracking application. Trace Labs, an app which focuses on an immutable, shared history of tracked products. ShipChain The idea behind ShipChain is to create a blockchain platform that allows a whole ecosystem of suppliers, shipowners, brokers, port authorities, and auditors, as well as users, to digitally register their assets and work together in a trustless environment. The application is built on the Ethereum blockchain, and its development team claims that ShipChain has a purpose beyond any single, particular use case. ShipChain's initial coin offering, which is scheduled for December 21st, 2017, is fully crowdfunded. There is an ICO Bounty program, which rewards both the project's developers and community members with a bounty for the creation of innovative content and interactions. To keep the funds coming in, there is also a referral program. The ICO is open to all participants with an Ethereum address, while the Bounty Program is only available to those who come up with the idea of a referral program. ShipChain calls itself the "global standard for supply chain." The token is called SHIP, and it will be used as a cryptocurrency token for all transactions, with a maximum supply of 19 billion. The tokens will be used to pay for blockchain fuel for the network, and to compensate stakeholders in the ecosystem. There are plans to create a variety of services, such as managing operations of ships, and verifying and guaranteeing the

compliance with the international maritime code of conduct. VITA, a vehicle information and tracking application. The application, which was announced last year, allows owners of light commercial vehicles to register and access all the information about their vehicle, including its maintenance history. The app also allows users to register for pre-registration or book a vehicle inspection. The user can enter a security code to unlock the locked parts of the app, such as a windscreen or the passenger area. The app allows drivers to set up reminders about maintenance and oil changes, and to

Navigate around drawings: Select shapes and groups of shapes without leaving the layout. Add or move the insertion point, edit the geometry in other tabs or on the ribbon without switching to another tab. Move editable content and layers in the drawing window to a new page. (video: 1:22 min.) Simplify the drawing interface: When you look at a drawing, you won't see the full ribbon – just the sections you need. To access all of the ribbon commands, you can use an optional toolbar with your commands. Use several lines of business simultaneously in an application: Use multiple instances of AutoCAD – for example, using two AutoCAD on the same computer – or run more than one AutoCAD instance on a single computer. To switch between AutoCAD applications, you can specify which application is the foreground application in the options. Add custom commands to the ribbon: Create your own custom commands and add them to the ribbon or toolbar. You can use the Command Reference to add the commands to the ribbon.
