-Advertisement- AutoCAD requires one of several microcomputers (running the AutoCAD operating system) that are designed specifically to operate with AutoCAD. When released, AutoCAD ran only on MS-DOS PCs with EGA graphics or on IBM-PC clones running MS-DOS, MS Windows 3.1, and XGA

graphics. Today, AutoCAD runs only on Windows PCs (since Windows XP) and Mac OS X. It also runs on Pocket PC or Windows CE devices using Windows CE operating system and uses a USB input device (Penabled or Intuos) to digitize hand drawings or signs. AutoCAD is also available as web apps. AutoCAD is used for architecture, mechanical, plumbing, electrical, civil, building, car design, and general engineering. Today, AutoCAD is the most popular CAD program used by architects, engineers, and drafters around the world. In fact, many

designers, car makers, and architecture firms still consider AutoCAD the de facto standard of computer-aided design. AutoCAD was originally used to create and edit AutoCAD drawings in a “schematic” or 2D fashion. In 2003, the introduction of 2D-only orthogonal lines (horizontal, vertical, and diagonal) enabled AutoCAD to become more effective in creating and editing 3D drawings and in the creation of animation sequences. Today, AutoCAD is the most powerful and popular computer-aided design (CAD) software. AutoCAD not only

enables users to create and edit 2D and 3D models but it can also be used to create animation sequences or video clips, to construct 3D models from scratch, and to perform numerous other tasks. For example, AutoCAD has proven to be a good drawing tool for project management, because it can be used to create and manage 3D models of a project site. AutoCAD and parametric design is a method of designing with predefined parameters. AutoCAD software enables the user to create and edit a 2D or 3D model using these

parameters. Once the model is complete, the user can immediately view and interact with it. This saves time and effort because the user can immediately review and correct any errors. -Advertisement-

introduced in AutoCAD 2014 (e.g., DWG/DXF support) ArcGIS Desktop is a third-party software for creating and editing raster images. ArcMap is a proprietary GIS (Geographic Information System) software developed by ESRI. It is part of the ArcView, ArcEditor, and ArcInfo series of applications that provide the user with comprehensive solutions to raster, vector, and related data manipulation tasks.

Blender is a free and open-source 3D modeling software which can be used to generate 3D objects and scenes for use in 3D rendering and game

development. A 3D viewport is the main screen that displays the current 3D view, and a 3D manipulator allows the user to interact with a model. Business integration AutoCAD Business Edition allows you to create 2D and 3D presentations, with online collaboration. These presentations can be integrated with business applications like: MS Office, Salesforce, HubSpot, Marketo, NetSuite, Software as a Service (SaaS), Workday, Workfront, Workiva, and Zoho. Educational Students who are part of the Autodesk Design Academy program can earn a

certificate by taking AutoCAD training courses and work with the program graduates in the Autodesk Design group. Finance Proposals can be created within AutoCAD, using the functions of the sales and marketing module.

These are used to create documentation for the buyer to analyze before signing a contract. Manufacturing AutoCAD is used to build models and assemblies and produce a drawing set, including 2D and 3D drawings, associated files, and documentation for manufacturing and production. Mobile Mobile apps support the

iOS and Android operating systems. AutoCAD Mobile lets users create and publish 2D drawings to mobile devices. Product AutoCAD is a 2D and 3D CAD system. AutoCAD was designed by Autodesk's first engineer, Tad Cook. Cook remains an employee and shareholder of Autodesk, the company. He was Autodesk's Vice President for Engineering, charged with the responsibility of introducing the new product. It has become the standard for 2D design around the world, as well as being used by the majority of

formatsA new bipartisan bill
introduced this week to cut back
on lobbying by federal
contractors is deeply flawed and
should be opposed by anyone
interested in a truly transparent
government. I-Lobby Disclosure,
introduced by senators John
McCain (R-AZ) and Sheldon

Whitehouse (D-RI), gives the appearance of doing something about government waste and corruption. But instead of delivering on this promise, the bill does everything it can to protect the power of special interests and corporate interests. It is a giveaway to corporations rather than a meaningful contribution to accountability. I-Lobby Disclosure imposes fines on federal contractors, the same fines that are already imposed on employees of government agencies. But since contractors usually are not employees, the fines are only imposed on

contractors who actually perform lobbying. This means a fine will be imposed on a contractor if it merely hires a lobbying firm or if it simply does not disclose it has hired a lobbying firm. This is a great idea. Because, of course, most lobbying is being done by in-house lobbyists. Government officials should be subject to the same scrutiny, from their own lobbyists, as government contractors. But such scrutiny should only be applied when they engage in any lobbying, whether by hiring a firm or by doing the work themselves. I-Lobby Disclosure provides that

finances would be imposed if contractors are found to have failed to report lobbying activities on behalf of their clients or
