Why should I use Elements? Photo editors like Elements are ideal for photographers. You can do a lot of editing in Elements without the need for learning a complicated editing program. The basic features that allow you to edit images include the following: Editing photos like cropping, resizing, creating basic effects like watermarking, applying filters, adding a copyright watermark, and adding a focus point Adding special effects like masking, dodging, and using collages Adding captions and special effects to images like frames, high-quality, and borders Creating new images by using cloning and cropping tools Using advanced features like making HDR images, manual selection of faces, and adding text The Elements App Here is a short video that shows what you can do with Elements: The usual image editing process is more or less the same no matter what program you use. However, the features and the sequence in which these features are used are different in Elements compared to traditional Photoshop. That is why I have set up an entire short course on how to use Elements and how to perform common tasks. In this course, I use Elements as the background software. The course is done in the order that one would use Elements for editing. Watch the course: The course takes about 1 hour to complete. Introduction to Elements In this lesson, I give an introduction to the whole editing process by illustrating common basic tasks. The course is set up like a tutorial so that you will learn basic features in the sequence in which they appear in the software. This tutorial is a good place to start if you are a beginner. Creating a New Project When you first open the application, you are automatically in a new project. In this lesson, I show you how to use the folders to store your images and how to save them as JPEG or PNG. Resizing Images In this lesson, you will learn how to resize and how to resize a selection. The crop tool makes it easy to crop images. However, there are quite a few points to consider when doing this. Learn the more advanced techniques that you can use like the Heal tool, the Guided Edit tool, and the Clone tool. Create a Watermark In this lesson, I show you how to add a watermark to an image. Q: MySQL AND/OR query to populate table I am attempting to have a query that populates a table. My main issue is how to have the query only check two fields, not three. So for example I want SELECT date_format(event.date_taken, "%Y-%m-%d") AS date_taken FROM event WHERE state_id = 'ED' AND either cdc.dna_id = 'JSA' OR cdc.dna_id = 'NHC' OR case cdc.dna_id when 'CDC' then cdc.structure_id = '28.7' end I would like to only run my query against the state_id = 'ED' if there is at least one of the following: CDC JSA NHC How would I accomplish this? A: I think you will need to use a union query: SELECT DATE_FORMAT(event.date_taken, "%Y-%m-%d") AS date_taken FROM event WHERE state_id = 'ED' AND (CDC.dna_id = 'JSA' or NHC.dna_id = 'JSA' or CDC.dna_id = 'NHC' or cdc.structure_id = '28.7') UNION SELECT DATE_FORMAT(event.date_taken, "%Y-%m-%d") AS date_taken FROM event WHERE state_id = 'ED' AND cdc.dna_id = 'JSA' or cdc.dna_id = 'NHC' Review: 'The Hobbit' The hobbit hearkens back to a simpler time. It's the early 1960s, and a 13-year-old boy is indulging in fantasy about Peter Rabbit, when his father, a Wall Street wh
