AutoCAD Crack + (Final 2022)

Supports the creation of applications via AutoLISP. AutoLISP provides a programming language that is designed to interact with AutoCAD from within the AutoCAD application. The AutoLISP object model is a set of classes for dealing with AutoCAD elements (geometric models, objects, blocks, layers, etc.). There is also a graphical application programming interface (GAPI) that is used for communicating with AutoCAD from within AutoCAD applications and other programs. The AutoCAD object model provides methods that are used to query the status of objects, transform objects, and move objects. Uses Visual LISP or a Visual LISP scripting language, where Visual LISP is a general-purpose, high-level programming language that can be used to program in AutoCAD for basic operations such as drawing and digitizing. It also has the ability to program or customize AutoCAD.

Visual LISP scripts are used to automate most basic tasks in AutoCAD, including drawing, editing, and verifying. Visual LISP is the primary tool for creating plugins and macros and thus most of the custom AutoCAD functionality is created using Visual LISP. Uses the VBA programming language and/or Visual Basic programming language to create custom AutoCAD functionality. VBA is a programming language that is used for AutoCAD automation and also includes the ability to create custom AutoCAD automation and macros. VBA is used in AutoCAD to create add-ons for editing, toolbars, and functions, and is also used to interface with other applications and create services. VBA is the primary tool for creating custom AutoCAD functionality. AutoCAD also supports Visual LISP extensions and the VBA language. VBA is not enabled by default, but its use is easy to turn on. There is no dependency between Visual LISP and VBA. It is possible to use VBA to extend Visual LISP-enabled functionality and there are special script languages that can be used to extend Visual LISP-enabled functionality (called Visual LISPX extensions or LISPXs). Visual LISPXs are scripts that are often used to perform more complex tasks in addition to those allowed in Visual LISP, such as programming inter-object actions or actions within a drawing. VBA is also supported in MText, which is a feature in AutoCAD 2010. MText enables AutoCAD to handle Microsoft Word ca3bfb1094
