

Sage is a software that automatically calculates the graphic equalizer settings which give the most realistic playback of sound, compensating for both your sound system and the acoustics of the room. It has a simple wizard interface, and will work with both hardware and software equalizers such as the one in Winamp. It can also balance the stereo for your listening position and correct for damage, such as a defective tweeter. Requirements: DirectX 8.0 drivers Limitations: Maximum frequency of 4KHz
 @marcFuellerMarked for deletion by Copyright Clearance Center on Thu Mar 01, 2017 2:15 am This download contains: * A fully functional, extremely fast and powerful (but very hidden!) command line MIDI sequencer with very little user-friendly manual. * A small but really powerful audio player with built-in MIDI controller and a fast and easy to use GUI. * A simple but powerful MIDI tracker. * A full featured MIDI event browser. * A lot of other nice tools. It comes with over 50 MIDI files. The following features are included: Track the state of your controller. Can play and record music in real-time (audio and MIDI). Can use Exakt Master Volume (ExaktMLP) to playback and record audio. Built-in and easy to use fully functional sequencer with a large amount of MIDI templates for faster editing. Built-in MIDI event browser. Detects and generates automatic MIDI events. Templates for MIDIClip. Generate track offsets automatically for your MIDI events. Automatic length corrector. Full midi learn features. Automatically aligns events and finally plays the file. Generates tempo markings (MPE format). Mouse-controlled midi events. Automatic controller assignments. Many other features. You need to install CUE files from the MIDI files provided with this download. You can copy and paste these into the appropriate CUE files in your next project. You can copy and paste these to the root directory of your next project. You can copy this CUE file to the root directory of your next project. Alternatively,

0.3.2 New Features and Improvements: * Added 2 hotkeys: 1.shift+alt+enter to switch between the visualization and the calculated settings, and 2.shift+alt+out to open a new tab to quickly switch between the visualization and the calculation mode. * Enabled 16 to 20kHz for the visualization. * Switched backend to only set the balance if desired, not always. * Fixed setting minimum in Spectrum graph. * Improved gain and frequency tracking when equalizing a horn speaker. * Improved visualization's frequency range and color saturation. * Improved visualization of the active channels when equalizing the total volume. 0.3.2 New Features and Improvements: * Added 2 hotkeys: 1.shift+alt+enter to switch between the visualization and the calculated settings, and 2.shift+alt+out to open a new tab to quickly switch between the visualization and the calculation mode. * Enabled 16 to 20kHz for the visualization. * Switched backend to only set the balance if desired, not always. * Fixed setting minimum in Spectrum graph. * Improved visualization's frequency range and color saturation. * Improved visualization of the active channels when equalizing the total volume. 0.3.1 New Features and Improvements: * New backend that allows you to just set the balance if you wish, not always. * Fixed setting minimum in Spectrum graph. * Improved visualization of the active channels when equalizing the total volume. * Implemented setting priority so that new settings override older settings. * Improved automatic gain calculation. * Improved visualization of what is being recorded and input level. * Improved frequency tracking in loudness setting mode. * Improved gain and frequency tracking when equalizing a horn speaker. * Improved visualization of the active channels when equalizing the total volume. * Improved visualization of the active channels when equalizing the total volume. 0.3.1 New Features and Improvements: * New backend that allows you to just set the balance if you wish, not always. * Fixed setting minimum in Spectrum graph. * Improved visualization of the active channels when equalizing the total volume. * Implemented setting priority so that new settings override older settings. * Improved automatic gain calculation. * Improved visualization of what is being recorded and input level. * Improved frequency tracking in loudness setting mode. * Improved gain and frequency tracking when equal

System Requirements For Sage:

Minimum: OS: Windows 7, 8, or 10 Processor: Intel Core 2 Duo (2.4 GHz) RAM: 2 GB Graphics: NVIDIA GeForce 8800GT/GTS or AMD Radeon HD 4870 DirectX: Version 9.0 Network: Broadband Internet connection Storage: 750 MB of available space on hard disk drive Sound Card: DirectX compatible sound card Input Device: Keyboard & mouse Additional Notes: Internet connection is not required to download the game and play the
