

Therefore, in this review article we tried to congregate the available information on various adsorbents used for the removal of MG, a cationic dye, from water and wastewater. The main objective of this review article was to compile an extensive list of adsorbents which will help the future generation to furnish comprehensive up-to-date research summary on adsorbents used for removal of MG dye. Also the reported optimal experimental conditions (solution pH, contact time and amount of adsorbent) as well as adsorption isotherms, kinetics and thermodynamics data of different adsorbents towards MG were also mentioned. The authors embolden the readers to refer to the original research articles for information regarding the experimental conditions. I recently started reading the excellent horror-fantasy series by Cassandra Clay that begins with Shadow of a Broken Eye, and Im currently on a binge. Its about three young women who try to resurrect a Great Old One (basically a large demon) in this enchanted Acid dyes are highly water soluble anionic dyes which contain one or more sulfonic groups/substituents and other acidic groups. They have better light fastness compare to basic dyes. The existence of sulfonic acid groups upsurge their solubility in water and give the dye molecules a negative charge. Acid dyes can be further divided into two sub-groups: Get the working theory of the main thermodynamics including: common laws, phenomena in nature, temperature, heat, volume, entropy, energy, pressure, distance, potentials, nonequilibrium and kinetic theory of gases. Understand how to apply the laws of thermodynamics to solve practical problems in: electricity, solar power, heating, ventilating, air-conditioning and refrigeration, convection, mechanics, heat exchangers, thermodynamics, fuel cells, gas analysis and electronics. Interconnect the relevant laws using examples. Discuss the relative importance of the laws. Describe key principles of the thermodynamics. Discuss the role of the laws in current society and the impact of the thermodynamics on the way we live.
