## **Reg Organizer 8.41 Full KEY Final Version [updated 12 25 2019 ] [Extra Quality]**

**Download**

Spacecraft payload types are further subdivided into those that use external supplies and those that are self-contained. Spacecraft payloads that use external supplies or are not self-contained rely on other sources to provide them with the necessary equipment, fuel, propellant, oxidizer, liquid or gaseous, to perform a particular function in space. Spacecraft payloads that are self-contained are capable of independent operation without an external supply. Aircraft payloads are considered to be independent spacecraft payloads and are included in this class. Aircraft includes all aircraft (and balloons), as well as all military and civilian spacecraft that are carried on or launched by aircraft. Balloons are those spaceships that remain connected to the ground at all times. Vehicle payloads are more or less autonomous spacecraft (e.g., minecarts, trucks, etc.) that use other means of propulsion and guidance than their own engines or propellants. Military spacecraft are those that can be used by a military. Spacecraft that can be used by the public or by non-military (e.g., satellite, recreational, scientific) users are referred to as civil spacecraft. These are considered to be non-military and self-contained spacecraft. Scientific payloads is a subset of the civil spacecraft payload. Scientific payloads are used for conducting experiments in space, for example, that require low weight or compact size. They are usually not permanently connected to the spacecraft bus but rather come with it. Primary payload is that complement of equipment designed from the outset to accomplish the prime mission function of the spacecraft payload mission set. The primary payload may operate independently from the secondary payload(s). Secondary payload is that complement of equipment designed from the outset to be fully integrated into the spacecraft payload mission set. The secondary payload may operate separately from the primary payload. Hosted payload is a complement of equipment or sensors that uses the available or excess capacity (mass, volume, power, etc.) of a spacecraft to accommodate an additional, independent mission. The hosted payload may share the spacecraft bus support infrastructure. The hosted payload performs an additional, independent mission which does not dictate control or operation of the spacecraft. A hosted payload is not capable of operating as an independent spacecraft. Spacecraft bus (distinct from the spacecraft payload), provides the support infrastructure of the spacecraft (e.g., command and data handling, communications and antenna(s), electrical power, propulsion, thermal control, attitude and orbit control, guidance, navigation and control, structure and truss, life support (for crewed mission)) and location (e.g., attachment, interface) for the spacecraft payload. Spacecraft payload is that complement of equipment attached to the spacecraft bus that performs a particular mission in space (e.g., communications, observation, science).

## **Reg Organizer 8.41 Full KEY Final Version [updated 12 25 2019 ]**

Changes, during sequential lateral position, in PaO<sub>2</sub>/FiO<sub>2</sub> ratio (1A), global end expiratory lung impedance (EELZ) (1B), respiratory compliance (1C) and mass of collapsed lung (%) estimated by EIT (1D). A significant improvement in PaO<sub>2</sub>/FiO<sub>2</sub> ratio, respiratory compliance and mass of collapsed

---

lung was observed when comparing the first supine position with the final lateral position. The gray lines represent each of the 6 animals and the black line show the mean values and standard error (SE) of the 6 animals. Paired T tests were performed to compare the first supine with the final lateral position. \*NOTE\* The lack of early payment discounts or discounts for renewals after the first purchase makes the purchase of event tickets with us more expensive than other ticketing vendors. Furthermore, this policy is designed to protect all participating Event Organizers from any and all risk associated with event ticket sales and/or purchases. For purposes of calculating any refund or issuing refunds, we will not be responsible for any losses associated with canceled or postponed events. \*NOTE\* If your event is canceled or postponed and you are requesting a refund, you may be charged the difference between the face value (if paid) and the discounted price if purchased. If the Event Organizer cancels or reschedules, we will charge the Event Organizer for the difference in the discounted price and the face value of any tickets purchased. If there is no difference between the face value and the discounted price, we will refund the difference to the original method of payment used at time of purchase. 5ec8ef588b
