What kind of image you are editing, from which camera you shot it with, the resolution that you are editing at, the mode that you are working in, etc. As I mention in my video, the day time I spent working with Lightroom 5 was the only day that I could finish the last steps in my editorial workflow. The day I spent learning how to properly use the New Adjustment Layer, for example, took me the entire day. Then I had to come back and figure out how to work successfully with the Layer Adjustment dialog and the parameters therein. This was not fun and I have recorded my frustration in the video. Surely, I would appreciate a less frustrating workflow in the future, as long as it remains stable and precise. Apart from the dedicated editing and optimizing tools, Lightroom is all about organizing your photographs. Through Lightroom's powerful Libraries feature, you can organize and manage your photos into multiple Collections. A Catalog, for example, represents a particular Collection, and your Collections are flexible to fit your needs. They could be organized by theme, or type, or any other relevant criteria. As you add photos to your Catalog, they are automatically added to the right Collection as well. Collection names can be customized and will be applied to your Collections to make them more meaningful.
