If any of you out there is wondering about the laggy aspect of Photoshop CC, I am operating it on a MacBook Pro 2017 using the integrated Intel Core i7 8th Generation processor (via the Mobile Intel Xeon E3-1505 v6 Pentium Gold 6237 CPU) and 16GB of RAM. To be frank, I am just wavering between disbelief and disbelief. Given that 2008-era Photoshop uses the same underlying processing architecture, the same is true for the latest Photoshop CC. Yet it feels like lightyears faster than the old Photoshop CS6. DNG files are imported up to 5GB, which I personally believe is not enough. The image format support also has been growing over the years, especially for the more recent RAW formats. In theory Lightroom should import any format that Photoshop itself supports. The performance is also balanced well. Lightroom Importing is quite responsive, while Layers, Colors, and Brushes are all using the exact same amount of resources. Whether you're working with a RAW file, a TIFF file or a PSD file, it all feels equally smooth. Where it does lose some points is with the Export process, where I think that some adjustments in the UI could do with some critical improvements. It's a very manual process, considering all the possible adjustments. Click on each adjustment, make your changes, and then export. Folders are auto-generated and there is no smart way of organizing your images, nor is there a way of easily collapsing and collapsing sub-folders. Rather, you export them in batches, which makes checking the Export progress difficult if you have a huge amount of shots to process. Simplification of UI workflows in this area would be a fantastic way to speed things up. Lastly, the only thing I would really like to see is a way to make Filters and Styles permanent, so that they don't disappear on export. As a reminder, I am not doing anything more than importing a PSD image, so there are no huge performance concerns for me, however the reviews will be looking at some of the finer points. Hopefully we will find out a couple things about Photoshop CC's performance in the coming days. For now though, it certainly passes the mark. Two thumbs up from me.

If you've got a Windows computer, you'll benefit from Photoshop's Scroll/Zoom interface. This is the first time that Photoshop has a nonlinear user interface. (It may seem like Photoshop already has this — you're right; it just hasn't offered it or organized the interface.) The new interface, however, is still familiar: You can zoom in and out, pan to another part of the image, squeeze or zoom the image, and make selections. Adobe Photoshop Elements offers a generous subset of the pro editor's features in a simplified package. It allows users to touch up portraits and landscape images, apply a variety of effects and put together manuscripts, websites and advertisements. Adobe Photoshop for Windows adds pressure-sensitive tablet support to landscape text layers in both big image views and long-scrolling image previews. It's made possible with the same new technologies in the latest edition of the software. With the new tabbed workspace for artwork, you can now arrange your layers and give them names freely, move them around and add adjustment layers to reposition them. Swipe through artwork and build a custom workflow for the photographs. At a time when advertisements are leaving few pixels unfilled, Adobe Photoshop CS4’s new Content aware tools, such as Content aware fill, Content aware scale and Content aware rotate, come in handy for roundabout, seamless work alongside fill, crop and straighten. One of the new features in Photoshop CS4 is Content-aware fill. This tool fills up holes in images and can replace objects’ last frame with a new one. It works in the following manner - if holes are found, you can get back the content by choosing fill from the fly-out list or choosing the new content-aware fill tool. If you apply fill from the menu, initially the tool simply fills up the holes, but its contents then move around the image, until you choose different content, for a detailed preview check before you use the tool. Alternatively, you can use the Content Aware Fill tool and adjust options like masking, filling and fill transparency to suit your needs.
